Function:

Used to duct pipes, cables and wires such as solar energy, photovoltaic installations and lightning protectors as well as guardrails through the roofing unit.

Type of connection:

Welding; direct connection to the roof sheeting; PVC, PP, PE, BIT (with a laminated bitumen sleeve).

Including shrink sleeve for secure and waterproof connections .

Options:

All four material types can be supplied in the diameter sizes: D10, D20, D30, D42 and D50.

The installation specifications of the roof sheeting manufacturers must be adhered to; the materials and material compounds used are subject to change; where necessary, further tests are to be carried out.

Custom-made products cannot be exchanged.

For further information please call your KALA technical advisor.

KALA, K.-H. Lange GmbH+Co. KG reserves the right to any change as may be technically or legally required without prior notice.
